COMMENTS

DEPTH

DESCRIPTION OF MATERIAL

1					light brown fine to very fine silty SAND, with increasing pebble content from 1.2 m to 4 m.				
2									
3	→	←	150 mm						
4									
5					dark brown, sandy gravelly SILT				
6					grey-brown silty sandy, fine to medium GRAVEL, subangular to rounded, moderately dense.				
7									
8									Inflow into hole decreasing.
9	▼		8.14		higher silt content				Inflow decreasing
10
